Biogas Scrubbers

UTB wet scrubbers are the most suitable option for small and mid-size plants and are designed for removal of hydrogen sulphide (H_2S).

Biogas is washed with a water-NaOH solution in a two-stage process: premixing at the inlet, and extended counterflow contact in a packed bed tower with the scrubbing solution.

Features:

- Skid-mounted package unit
- Stainless steel construction
- Base tank with float switches and pH-meter
- On-board solution recirculating pump + NaOH dosing pump
- Packed bed tower with random dumped packing
